Where we come from. Gloves of the highest quality.

Materials

- Latex
- Nitrile
- TPE
- Vinyl
- PE
- General-purpose and reusable, made of latex, nitrile, cotton, etc.

The “comprehensive insurance” for hands and skin.
Protective gloves from AMPri.

What is latex?

Latex gloves - unlike those made of vinyl or nitrile - are immediate products of nature. For latex is harvested directly from rubber trees. Here, the tree is literally tapped for the latex milk, in that a cut is made into the bark of the tree causing the liquid to flow into a collecting container. This is done in a sustainable way since the farmers, of course, have an interest in healthy rubber trees that allow harvesting latex for as long as possible. Thanks to its outstanding physical properties and the resulting high wearing comfort, natural latex cannot currently be fully replaced by another material.

Advantages of latex

- Natural product
- Extremely flexible
- Good sense of touch
- Good resistance to a wide range of acids and alkaline solutions

Disadvantages of latex

- As a raw material, latex is subject to fluctuating harvest yields and commodity prices.
- Latex gloves contain water-soluble proteins which may cause allergies if the gloves are worn frequently; in addition, the powder used for the powdered variant of the gloves is a critical allergen carrier.
- Latex gloves are permeable to oil and solvents.

What are the main areas in which latex gloves are used?

- Quick cleaning without coming into contact with chemicals
- Food production and food processing
- Nursing
- In a doctor's or dentist's surgery, hospitals, nursing homes, for tasks that involve a risk of coming in contact with body fluids and blood
- In beauty salons and tattoo studios

Latex is a liquid material, so additives are needed to give it the required strength. Once dry, latex gloves are extremely flexible and, with their natural smoothness, comfortable to wear. They convey a particularly good sense of touch.

Our range of latex gloves.

1. A rubber tree being harvested. Originating from South America, the rubber tree is now mostly at home in Southeast Asia.

2. Adding a splash of colour. This is how our gloves get their colour.

Our range of latex gloves.

01012 Basic-Plus latex examination gloves

- The low-price alternative: good quality at a reasonable price for many applications
- Roughened surface for good grip
- Ambidextrous fit for flexible use
- Powdered
- Non-sterile
- Colour: white

01038-XXL	XXL	10 boxes of 100

Our range of latex gloves.

Gloves that meet the highest demands - what is special about the Absogel?

- Hand-specific (anatomical fit: individually shaped for the left and the right hand), in pairs
- Micro-roughened surface for good grip
- Moisture-absorbing hydrogel coating on the inside to prevent sweaty hands
- Double chlorinated and, thus, powder-free with lower protein content – which significantly reduces the allergy risk
- Strong design; these gloves ensure the highest safety
- Non-sterile
- Colour: white

Quality features

- CE
- AQL 1,5
- EN 420
- EN 455
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

01231 Med-Comfort Ultra 480 latex examination gloves

- Top quality with the comfortable length of 480mm
- Good grip through texturing
- The glove's features make for many different applications
- Chlorinated on the inside and on the outside and, thus, powder-free
- Non-sterile
- Colour: white

01231 Med-Comfort Ultra 480
Latex examination gloves

From geriatric nursing to dental and medical applications – this is where these gloves are used. Long gloves are particularly favoured for work in nursing and laboratories. Also in veterinary medicine, the Med Comfort Ultra 480 is an indispensable helper due to its length.

Quality features

01034-M	M	10 boxes of 100
01034-L	L	10 boxes of 100
01034-XL	XL	10 boxes of 100

Arguably our best product that has a good grip on everything. Thanks to the polymer coating on the outside and the resulting grip, these gloves are particularly well-suited for dental applications. And chlorination on the inside prevents allergic effects. A certified medical product: EN 455. Used not just in healthcare but also in laboratories and research.

01036 Med-Comfort Aloe latex examination gloves

- The green skin-friendly gloves with aloe vera, chlorinated on the outside and coated with aloe vera on the inside to achieve a caring effect
- Roughened surface for good grip
- Ambidextrous fit for flexible use
- Powder-free
- Non-sterile
- Colour: green

01036 Med-Comfort Aloe
Latex examination gloves

These gloves with aloe vera coating are used in environments in which they are worn for a longer time, such as in beauty and manicure salons as well as in dentistry.

01035 Med-Comfort Latex finger cots

Item number	Size	Packaging unit	Minimum quantity
01035-2	2	300 bags of 100	10 bags of 100
01035-3	3	300 bags of 100	10 bags of 100
01035-4	4	300 bags of 100	10 bags of 100
01035-5	5	300 bags of 100	10 bags of 100

Finger cots are used for industrial applications. In electronics manufacturing, finger cots are used whenever sensitive components need to be handled – as, for example, in semiconductor technology. They help to protect the semiconductor wafers from electrostatic discharges. In the watchmaking industry, they ensure that sensitive parts of the watches do not come into contact with grease and skin particles. Finger cots help to prevent fingerprints on sensitive products.

Even in arts and crafts, finger cots are used, for example, to restore paintings: these, too, need to be protected from grease and skin particles.

Our range of latex gloves.

Why use coloured gloves and where? What advantages does the use of colour have?

Coloured gloves help to make work processes in healthcare, nursing, and industrial environments easier and safer; they assist staff in strictly adhering to hygiene schedules. In industry, for example, during shift work, different glove colours can be used for different shifts. In this way, the shift supervisor can immediately see whether any gloves should not be worn in his or her shift (as they are reserved for another shift and, therefore, have been worn for too long) and take corresponding action. Furthermore, cleaning areas can be clearly defined using different colours. This prevents contamination from other areas or, at least, renders such contamination almost impossible, because it is clearly defined and obvious who works in which coloured area. There are countless applications and matching colour systems depending on the hygiene schedule required. Using coloured products can make work safer and easier; in hospitals and medical centres, it can promote adherence to hygiene measures. Using colours for a better overview! Additional applications can be found in dentistry and hairdressing and beauty salons. Here, coloured gloves make for a good team spirit, help to mark different work areas, contribute to a cheerful working environment and to the patient's or customer's well-being. This holds for both latex and nitrile gloves.

Our quality in multicolour.

The coloured ones made of nitrile –

Style by Med-Comfort

Nitrile examination gloves in many colours

- The all-rounder for almost every industry
- Resistant to many chemicals

Our range of nitrile gloves.

What is nitrile?

Nitrile is a synthetic rubber (nitrile butadiene rubber) that was developed in Frankfurt am Main around 1930. Disposable gloves manufactured from nitrile are highly resistant to oils and fats and also provide excellent protection from solvents, chemicals, germs, and viruses. What is more, they boast a favourable ageing behaviour and low abrasion. Thanks to its structure, the material is very flexible; it has a so-called material memory and neatly adapts to the shape of the hand. As the synthetic rubber is completely free from allergenic proteins, nitrile gloves are the perfect skin-friendly alternative to latex gloves. Gloves made of nitrile are used for all applications that require the use of disposable gloves. More and more users switch to this alternative, since nitrile gloves combine several advantages. They provide the fit and, thus, the sense of touch of latex gloves, and they are conductive.

1. Nitrile examination gloves in healthcare and nursing.

Advantages of nitrile

- Very stretchy – up to 500% and more
- Has a so-called material memory and neatly adapts to the shape of the hand
- Provides optimum grip
- Is more cut-resistant than other materials
- Is highly resistant to chemicals
- Is free from proteins and, thus, the perfect alternative for people suffering from latex allergy

Disadvantages of nitrile

- —

What are the main areas in which nitrile examination gloves are used?

- Nursing and geriatric nursing
- Dentistry
- Food production and food processing
- Short-time cleaning activities
- Pharmaceutical and chemical industries (including cytostatics and hormone preparations)
- Hairdressing and beauty salons as well as tattoo studios
- Glove wearers suffering from a latex allergy and requiring an alternative

2. Long nitrile glove variant for perfect splash protection and with optimum fit due to a material memory

Our range of nitrile gloves.

The low-price alternative – Basic-Plus nitrile examination gloves

01200, 01197, 01220 Basic-Plus Nitrile examination gloves

- With textured fingers

Thin-film nitrile gloves

Like a second skin: **THIN-FILM NITRILE GLOVES** give the user excellent tactile sensitivity. Nitrile is a synthetic rubber (an elastic polymer) that shows extreme flexibility and tear resistance. Gloves made of nitrile remain impermeable until they tear; if overstretched, they won't get porous or permeable.

Owing to their material properties, thin-film nitrile gloves perfectly mould to the shape of the wearer's hand, offering very good ergonomic wearing comfort and, thus, preventing fatigue of the hands when worn for a long time. Another great advantage of nitrile gloves – whatever their design – is their resistance to abrasion and cuts.

Thin-film nitrile gloves are of a light quality, powder-free, and resistant to many chemicals and solvents. This makes them the perfect choice for food applications. However, they are also ideally suited for applications in healthcare, nursing, and laboratories; for these light disposable gloves are non-allergenic, resistant to oils and fats, and prevent heat build-up in the glove thanks to optimum heat dissipation.

NON-ALLERGENIC – UTMOST FLEXIBILITY – EXCELLENT TACTILE SENSITIVITY – PERFECT GRIP!

THE NITRILE GLOVE!

Donning and doffing the gloves properly. Finding out the right glove size.

Finding out the right glove size.

Wash and disinfect your hands before wearing disposable gloves. Hands should be washed (for about 40 to 60 seconds) with lukewarm water and soap only if they are visibly dirty. Cleaning your hands with an alcoholic disinfectant is faster (it takes 15 to 30 seconds), more effective and more skin-friendly than washing your hands. Let your hands get dry before donning the gloves.

Fingernails should be short enough to be easily kept clean. Do not wear or use artificial fingernails, coloured nail varnish or rings/jewellery on your forearm to prevent damage to, or tearing of, the gloves.

Carefully pull the glove loosely over the fingers of one hand and put the thumb of your other hand softly into the glove from the bottom of your wrist.

Now hold on to the glove by moving the other fingers from the outside of the glove to the thumb beneath it. Pull the glove up in the direction of the elbow without stretching it too much.

Pull the glove to achieve the right fit, but make sure not to overstretch the material. Overstretching the material might weaken it, causing it to tear when the glove is put on or pulled off after use.

Please, avoid overstretching of the glove. **TIP: Don't pull up gloves much farther than your wrist.**

Finally, put the fingers of the glove in the right position.

Take care to choose the right glove size for your hands (the dimensions may differ between manufacturers) to prevent overstressing of the glove through overstretching (often causing gloves to tear).

When doffing the glove, one hand reaches into the palm of the other hand and lifts the glove. The hand then pulls off the glove, holding on to it.

The hand without glove now reaches beneath the cuff of the glove on the other hand and pulls the glove off. In the end, the glove is turned inside out, containing the other glove within.

How do I find out my glove size?

To find the right size for your hands, you can refer to a corresponding rule specified by the German statutory accident insurance association. This rule is referred to as **BGR 195**.

According to **BGR 195**, glove size is determined as follows.

Hand sizes and dimensions

The dimensions of the hand are defined as follows:

- Circumference of the hand measured 2cm above the crook between thumb and index finger
- Length of the hand (distance between the line on the wrist and the tip of the middle finger)

Method of measurement

Legend

w Width
l Length

Figure 1 - Determining the length and width of gloves

Here, you can measure your hand:

Table 1 – dimensions of surgical gloves

Size	Length a l mm	Width b, c w mm
5	≥250	67 ± 4
5,5	≥250	72 ± 4
6	≥260	77 ± 5
6,5	≥260	83 ± 5
7	≥270	89 ± 5
7,5	≥270	95 ± 5
8	≥270	102 ± 6
8,5	≥280	108 ± 6
9	≥280	114 ± 6
9,5	≥280	121 ± 6

a Measure l as in figure 1.
b Measure w as in figure 1.
c The width requirements apply to gloves made of natural latex and all other elastomeric materials. These measures may be unsuitable for gloves made of other materials.

Table 2 – dimensions of examination gloves

Size	Length a l mm	Width b, c w mm
Extra small	≥240	≤80
Small		80 ± 10
Medium		95 ± 10
Large		110 ± 10
Extra large		≥110

Note: Optionally, the manufacturers can use the sizes and dimensions of table 1, thus, offering a wider range of glove sizes.

a Measure l as in figure 1.
b Measure w as in figure 1.
c The width requirements apply to gloves made of natural latex and all other elastomeric materials. These measures may be unsuitable for gloves made of other materials.

Donning and doffing the gloves

Finding out the right glove size

Our range of TPE gloves.

01100, 01101, 01102 TPE gloves
(white, blue, black)

- Stretchy and tear-proof
- Good sense of touch
- Good fit on hands and fingertips
- Soft and smooth surface
- Skin-friendly, as they are free from phthalates, silicone, and latex
- Inodorous
- UV-resistant
- Powder-free
- Non-sterile
- Colours: white, blue, black
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)
- 240mm - 290mm in length
- Thickness of coating 0.03mm

Use

- Food processing
- Kitchen and catering
- Cosmetics & care

200 units per packet due to lower strength!
Environmentally friendly and economical!

01100, 01101, 01102
TPE-gloves

The white TPE glove 01100 is very well suited for use in cosmetics!

What is actually TPE?

TPE (thermoplastic elastomers) is a material of silicone-like quality. The material – as used for gloves – is like a skin. It is free from plasticisers, silicone, and latex.

What is vinyl?

Vinyl (base material: polyvinyl chloride, also known as PVC) features good resistance to acids, alkaline solutions, and other chemicals. It does not change through atmospheric effects. Compared to latex gloves, vinyl gloves are free from allergenic proteins. They are a low-price alternative to latex and nitrile gloves and particularly recommended if gloves have to be changed frequently. Vinyl is very soft and feels comfortable on the skin. However, vinyl is less flexible than, for example, latex or nitrile and has a lower accuracy of fit. Nowadays, most vinyl gloves dispense with the potentially harmful phthalates (plasticisers) diethylhexyl phthalate (DEHP) diethylhexyladipat (DEHA).

Advantages of vinyl

- Free from allergenic proteins & sensitising substances
- Soft and comfortable on the skin

Disadvantages of vinyl

- Much lower accuracy of fit than latex or nitrile
- Much less flexible than latex or nitrile
- Usually treated with plasticisers that are fat-soluble, which is why these gloves can be used in food production or processing only in a limited way.

What are the main areas in which vinyl examination gloves are used?

- Cleaning (without contact with concentrated chemicals)
- Simple care activities
- The food industry (food has to be free from fat, because fatty food may be contaminated with plasticisers possibly contained in the material)
- Laboratory use (in a limited way)

What are DEHP and DOP?

Diethylhexyl phthalate (DEHP) and dioctyl phthalate (DOP) are plasticisers used for PVC. Plasticisers make materials softer, more flexible, smoother, and more elastic.

Our range of vinyl gloves.

1. Vinyl gloves featuring super-stretch quality.

2. Long vinyl variants for perfect splash protection

Our range of vinyl gloves.

01265 Eco-Plus Superstretch vinyl examination gloves

- Quality "almost like latex"
- Colour similar to that of latex gloves
- Much stretchier than normal vinyl gloves
- Smooth palm
- Ambidextrous fit
- Contains no allergenic proteins
- Powder-free
- Non-sterile
- Colour: white

Quality features

- CE
- AQL 1,5
- EN 420
- EN 455
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)
- Medical product Class I in line with the directive 93/42/EEC
- 240mm in length
- Thickness of palm coating ca. 0.09mm

01265 Eco-Plus Superstretch Vinyl examination gloves

The Eco variant of the 01295 Med-Comfort Superstretch. These gloves have the same qualities but a lower wall thickness.

Our range of vinyl gloves.

01071 Med-Comfort vinyl examination gloves

- Comfort model
- Strong design
- Increased wall thickness
- Smooth surface
- Ambidextrous fit
- Contains no allergenic proteins
- Contains no DOP/DEHP
- Powdered
- Non-sterile
- Colour: transparent

Quality features

- CE
- AQL 1,5
- EN 420
- EN 455
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)
- Medical product Class I in line with the directive 93/42/EEC
- 240mm in length
- Thickness of palm coating ca. 0.11mm

The comfort model with that certain strength. Powder ensures easy donning even with damp hands. Patients find that the smooth vinyl feels very comfortable during washing. This is why the gloves are very well suited for safe nursing and cleaning. The gloves can be used in healthcare and the food industry in a limited way.

- Thickness of palm coating ca. 0.11mm

Are these made of latex? This is a frequent question given such quality and colour. No, these gloves are made of vinyl. Still, they feature many of the positive qualities of latex! They are comfortable to wear and very flexible due to the admixture of a special substance. These vinyl gloves are suitable for almost all applications.

Our range of PE gloves.

What is PE?

Gloves made of polyethylene (PE) are perfectly suited for use in the food industry, because the plastic material is tasteless and inodorous. Especially, butchers and vets use PE gloves.

- With a share of 30% of the total volume, polyethylene is the most frequently used plastic material. Polyethylene is a semi-crystalline and non-polar thermoplastic.
- In its basic form, the substance is colourless transparent to milky white; however, through dyeing it is available in any colour. There are two main types of polyethylene:
- Low density PE (LDPE) is soft and very flexible. It is cold-resistant to -50°C and heat-resistant to +60°C.
- High density PE (HDPE) is stiffer and more abrasion-resistant than low density PE. It is cold-resistant to -50°C and heat-resistant to a maximum of +90°C.

Advantages of PE

- Very inexpensive production and, thus, procurement
- Food-safe, oil- and fat-resistant
- Can be used for many applications
- Skin-friendly

Disadvantages of PE

- Does not stretch
- No accurate fit
- Made of plastic material and is, therefore, not biodegradable

What are the main areas in which PE-gloves are used?

- In butcheries
- Veterinary practices
- In food retailing

1. PE gloves for quick and short applications

2. Long PE gloves – perfectly suited for use in veterinary medicine.

Please, note: PE gloves are not suitable for handling hazardous substances! They are not "diesel gloves"!

Our range of PE gloves.

01080-S/-L Med-Comfort PE gloves

- Embossed
- Inodorous and tasteless
- Ambidextrous
- Non-sterile
- Colour: transparent

01080-S/-L Med-Comfort PE gloves

- Aluminium
- Suitable for 01090-S and 01090-L

Quality features

- Dimensions: ca. 195 x 168 x 14 mm

Item number	Packaging unit
09053-A	25 units

What are reusable gloves?

Our range of reusable gloves.

Unlike disposable gloves, reusable gloves can be used several times after they have been properly cleaned. Mostly, they are manufactured from high-quality or strong materials to ensure consistent quality. Whether it is worth buying such gloves depends very much on the areas in which the gloves are used and on factors such as stress and abrasion. We would be delighted to help you choose the right gloves and to provide pertinent advice on aspects like durability and resistance to chemicals. The following criteria should definitely play a role in choosing the right gloves:

Individual user requirements

- Allergic reactions to materials (rubber ingredients, latex, colourants, etc.)
- Irritation caused by impregnation or flocking
- Increased perspiration
- Open wounds / risk of infection
- Allergic reactions to agents
- Tolerance in combination with skin protection products

01160 Clean Expert Nitril Industrial nitrile gloves

01050 Eco-Plus tricot liner gloves

- Pure cotton
- Accurate fit thanks to individual sizes
- Ambidextrous
- With fourchettes (side strips of the fingers in a glove)
- Absorbs sweat, thus, preventing strong sweating in disposable or reusable gloves
- Protects products from finger prints, dirt, and sweat
- Colour: white (bleached)

Quality features

- Length from 205 to ca. 270mm

01050 Eco-Plus Tricot liner gloves

The crucial advantage of cotton gloves is that they absorb the moisture which develops on the palms when wearing disposable gloves. Hands stay dry longer so that the negative effects of wearing gloves (caused by the damp environment) are significantly reduced. Liner gloves are frequently used especially for general care activities, when washing patients or doing cleaning work, to bridge a longer time-span wearing disposable gloves without getting sweaty hands.

04020-O-M	10 x 100 = 1,000

Why head covers are so important

Head covers are used wherever special hygiene is expected and required. For hygienic reasons, it is absolutely necessary to wear a head cover in operating theatres, hospitals, doctor's surgeries and when handling food. In industrial environments, head covers are used for personal protection. Covering your head prevents hair from getting twisted around movable machine parts. Head covers fully cover the top of the head, with an elasticated edge reaching just below the hairline. They prevent skin scales and hair particles from coming off and migrating. A head cover should be light and breathable to prevent unnecessary sweating.

04029 Med-Comfort mob cap detectable

- Made from light and breathable spunbonded polypropylene (PP)
- Latex-free
- Clipped
- Aluminium strip to easily detect the cap in case of loss
- Size M (Ø ca. 52cm)
- Colours: white, blue, green, and red
- 10 x 100 units in a carton
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

Item number	Packaging unit
04029-W-M	10 x 100 = 1,000

Protective glasses – no need to turn a blind eye.

PROTECTIVE GLASSES are intended to protect your eyes from harmful influences such as strong light, chemicals, dust, splinters and the weather. Protective glasses are basically constructed in the same way as optical glasses. Most common are single- and twin-lens glasses that are fixed like standard optical glasses by means of arms above the ears. Goggles additionally protect the eyes through a flexible frame that fits snugly against the face. An adjustable elastic strap ensures a good seal.

8101 Airmaster goggles

- Colourless polycarbonate screen
- PVC frame
- Adjustable elastic
- Colour: transparent blue
- When handling aggressive liquids in industrial and chemical environments, in laboratories and crafts
- Not resistant to acids and alkaline solutions
- Heat resistant up to ca. 70°C
- PPE category 2 in line with the PPE directive 89/686/EEC (replaced by PPE regulation EU 2016/425)

Item number	Packaging unit

Ear protection – to ensure your hearing will be as good tomorrow as it is today.

Disturbing noise – that is something one does not want to hear. **EAR PLUGS** are made from soft plastic and reduce surrounding noise. They have the right shape and just need to be inserted into the ear canal. Ear plugs can often be connected to a carrying strap.

A-2750 Ear plug Master

- Packed in pairs
- Extra soft and comfortable to wear
- Excellent protective effect of 32 dB
- Expands after it has been pressed together and inserted into the ear canal
- Adjusts perfectly to any ear canal shape
- Moisture-resistant and skin-friendly
- Colour: orange
- CE EN 352-2
- SNR 32 decibels (dB)
 - High frequencies H: 34 dB
 - Medium frequencies M: 28 dB
 - Low frequencies L: 25 dB
- PPE category 2 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

Item number	Packaging unit
A-2750	10x 250 pairs = 2,500

A-2761 Preformed ear plug Artifit

- Ear plugs with connecting string
- Made of skin-friendly flexible plastic
- "Christmas tree" shape
- Colour: orange
- CE EN 352-2
- SNR 21 decibels (dB)
 - High frequencies H: 22 dB
 - Medium frequencies M: 18 dB
 - Low frequencies L: 16 dB
- Used for protection from noise, working in very noisy environments, attending loud concerts or music events
- Recommended for noise levels between 85 and 92 dB
- PPE category 2 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

Item number	Packaging unit
A-2761	25x 12 = 300

Face masks in healthcare, nursing, and industry.

In healthcare, **FACE MASKS** help prevent the transmission of germs. When breathing out, any germs that would otherwise spread in the ambient air are retained by the face mask. Moreover, face masks can prevent infections caused by breathing in ambient air. Correspondingly, germs that would get into the environment through droplet transmission cannot spread. And breathing in droplets is prevented. In industrial applications such as food production and food processing, face masks prevent the contamination of the product through germs or other contaminants. They are also used when working in dusty environments.

Face masks in many qualities and colours.

- 02060 Facemate disposable surgical masks with tie bands
- 02061 Facemate "Ultrasonic" face mask with tie bands
- 02064 Facemate "Anti-Fog" face mask with tie bands

- Made of non-woven polypropylene (PP)
- Free from latex and fibreglass
- Perfect fit
- Breathable and very comfortable
- Colour: green
- Filter efficiency 98%
- EN 14683 Typ II (02060, 02061) Typ IIR (02064)
- For healthcare, nursing, and areas with strict hygiene requirements
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

02050 COLDEX surgical mask

- 3-ply
- Elastic bands made of polyester
- Free from latex and fibreglass
- Colour: green
- Filter efficiency 98%
- EN 14683 Typ II
- For healthcare, nursing, and areas with strict hygiene requirements
- PPE category 1 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)
- Medical product Class I in line with the directive 93/42/EEC

Item number	Packaging unit
02050	10 boxes of 50

Classification of face masks – what do type I^a, type II or type IIR signify?

The specifications of face masks are defined in EN 14683 (Medical face masks – requirements and test methods). What is tested is the filter material, not the seal. The face mask is not a respirator: its primary purpose is to prevent the spread of droplets from the nasopharynx of the wearer. At the same time, the face mask protects the wearer from splashes with body fluid of the patient and from particles occurring in dusty or dirty environments.

Test	Typ I ^a	Typ II	Typ IIR
Bacterial filtration efficiency	≥ 95	≥ 98	≥ 98
Pressure difference Pa	< 29,4	< 29,4	< 49,0
Pressure of splash resistance mmHG	not applicable	not applicable	≥ 16,0
Microbiological purity (KBE/g)	≤ 30	≤ 30	≤ 30

^a Type I medical facial masks should only be used in patients and other persons to reduce the risk of spreading infection, particularly in contagious or pandemic situations. Type I masks are not intended for healthcare professionals in operating rooms or other environments with similar requirements.

Top-level respiratory protection – filtering facepieces for protection from particles.

Respirators protect the wearer from aqueous and oily aerosols, fumes, and particulate matter during work. Their protective function has been standardised throughout Europe (EN 149). They are referred to as filtering facepieces. There are three protection levels: FFP1, FFP2, and FFP3. Filtering facepieces are typically made of 100% non-woven fabric with elastics and a mouldable nose clip, thus, ensuring optimum fit.

Level	Total inward leakage	Protection from particles (of up to 0.6µm) and application
FFP1	Maximum 25%, average not more than 22%	For non-toxic and non-fibrogenic dust particles; maximum concentration 4 times the occupational exposure limit
FFP2	Maximum 11%, average not more than 8%	Filtering efficiency at least 95% for harmful dust particles, mist and fumes; filtering solid and liquid particles; protection from harmful substances with concentrations of up to 10 times the occupational exposure limit
FFP3	Maximum 5%, average not more than 2%	At least 99% protection from toxic substances and liquid aerosols, carcinogenic substances, radioactive substances, enzymes, micro-organisms (viruses, bacteria, fungi and their spores); protection from harmful substances with concentrations of up to 30 times the occupational exposure limit

The comfort class – Med-Comfort FFP1/2/3 masks.

Top-level respiratory protection – filtering facepieces for protection from particles.

Med-Comfort filtering facepieces

- Made of polypropylene
- Elastic bands
- See table for different filtering levels and features
- Approved in line with CE EN 149:2001 + A1:2009
- **Important: Beard and hair growth may interfere with a tight fit of the FFP masks!**

Item number	Filtering level FFP	Can be used with up to x times the occupational exposure limit (OEL)	Valve	Product description / Packaging unit (PU)	Applications
P-1000	FFP1 NR D	4 times	no	Conical shape, latex-free elastic bands, weight 14g, PU = 12 boxes of 20	Protection from non-toxic dust particles and aqueous and oily aerosols, not from carcinogenic and radioactive substances nor from airborne biological agents of risk groups 2 and 3 as well as enzymes
P-1100	FFP1 NR D	4 times	yes	Conical shape, latex-free elastic bands, valve made of synthetic rubber, plastic, and polypropylene, weight 19g, PU = 12 boxes of 10	Protection from non-toxic dust particles and aqueous and oily aerosols. No protection from carcinogenic and radioactive substances as well as airborne biological agents of risk groups 2 and 3 as well as enzymes

Concerns all FFP masks: PPE category 3 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

The occupational exposure limits (OEL) are a crucial parameter of workplace safety. When it comes to wearing protective masks, an awareness of the OELs and the corresponding specification of the masks for the respective workplace environments is absolutely essential.

Concerns all FFP masks: PPE category 3 in line with the PPE directive 89/686/EEC (replaced by the PPE regulation EU 2016/425)

Why use aprons in healthcare and nursing?

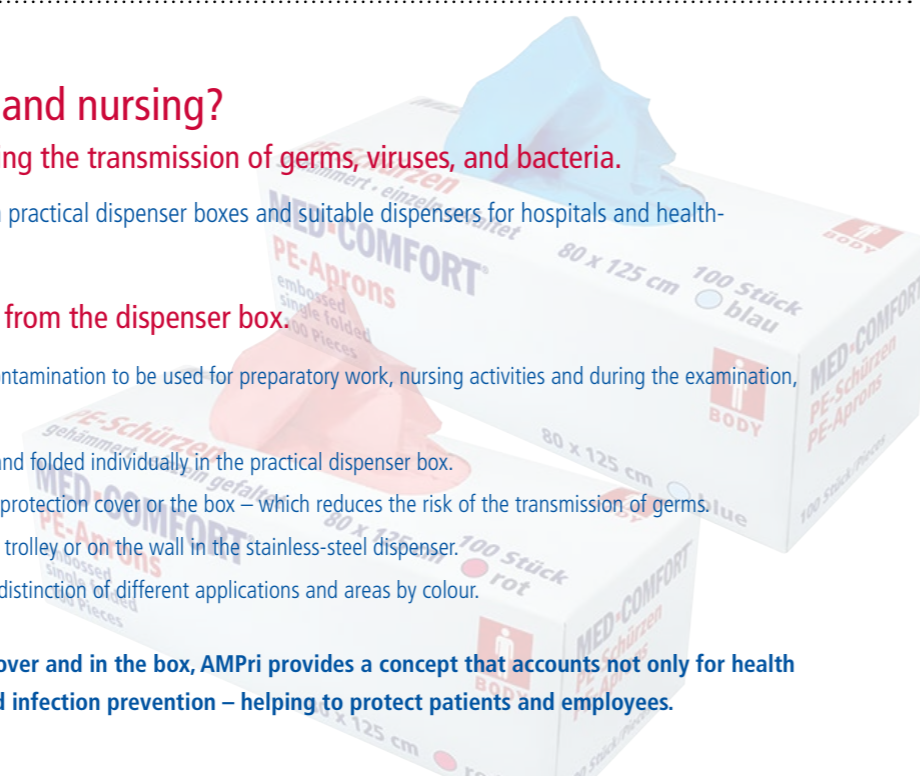

Ensuring protection from infection – avoiding the transmission of germs, viruses, and bacteria.

Hygienic protection thanks to disposable PE aprons in practical dispenser boxes and suitable dispensers for hospitals and health-care facilities.

Applications and advantages of the aprons from the dispenser box.

- Liquidproof PE aprons protecting from splashes and contamination to be used for preparatory work, nursing activities and during the examination, for example, in endoscopy.
- Available both flat packed with dust protection cover and folded individually in the practical dispenser box.
- Well protected from contamination thanks to the dust protection cover or the box – which reduces the risk of the transmission of germs.
- The box can be mounted either directly on the medical trolley or on the wall in the stainless-steel dispenser.
- PE apron available in 5 colours – making possible the distinction of different applications and areas by colour.

With the PE aprons available with dust protection cover and in the box, AMPri provides a concept that accounts not only for health and safety at work but also for hospital hygiene and infection prevention – helping to protect patients and employees.

05010 Med-Comfort non-woven PP visitor coat

- Made from light and breathable spunbonded polypropylene
- Features 4 press studs

Better protection.

Visitor coats are used wherever cleanliness, protection and hygiene are required or clothes have to be protected from dirt.

The visitor gowns made from non-woven fabric are perfectly suited for hygiene, nursing, and medical applications.

MED-COMFORT provides more comfort.

Protection from head to toe

Protection from head to toe

Disposable protective wear as a useful barrier – keeping employees and patients well protected

The clothes of healthcare professionals can have an important function in the multi-barrier system that helps to prevent infections. Protective clothing is designed to protect employees from harmful impacts during work. Protective clothing can also have a protective effect on patients, if it is used accordingly. Thus, protective clothing affords a protective effect with regard to hygiene, infection prevention, and health and safety at work.

Our comprehensive range of disposable protective gowns, visitor coats, and aprons features the right product for almost every application. Take a look at our high-quality products in their different designs and benefit from our experience.

CAT III Category III-Protective overalls - from standard to professional.

05170 MED-COMFORT SAFE PROTECT 1 standard overalls

The standard overalls, when perfect protection is required. The overalls feature multi-layer SMS material, a three-piece hood, elasticated wrists, ankles, and waist, external seams, a zip with storm flap, and a three-piece crotch gusset; they are breathable and antistatic in line with EN 1149-1. The overalls conform to: CE cat. III, type 5+6 dust-proof and, in a limited way, splash-proof, EN 530, EN ISO 13935-2, EN 863, ISO 7854 B, EN ISO 9073-4. The overalls are available in white and blue.

1 Category 1: straightforward PPE to guard against minimal hazards, e.g.:

- low-impact cleaning agents and cleaning agents with a diminishing effect (such as diluted cleaning solutions)

Category 2: PPE to guard against medium hazards, e.g.:

- mechanical hazards

Category 3: complex PPE to guard against deadly hazards and irreversible health damage, e.g.:

- chemical impacts or ionising radiation contaminations
- resistance to infectious agents

05175 MED-COMFORT SAFE PROTECT 2 professional overalls

The overalls in professional quality. The overalls feature microporous film laminate, a three-piece hood, elasticated wrists, ankles, and waist, a zip with double storm flap, and a three-piece crotch gusset; they are breathable and antistatic in line with EN 1149-1. The overalls conform to: CE cat. III, type 5+6 dust-proof and, in a limited way, splash-proof, EN 530, EN ISO 13935-2, EN 863, ISO 7854 B, EN ISO 9073-4, EN ISO 13934-1, EN ISO 17491-4:2008 + EN 13034:2005 + A1:2009, EN ISO 13982-1, EN 1073-2:2002, EN 14126:2003. Protection from contamination according to EN 1073:2002. Resistance to infectious agents according to EN 14126:2003. The overalls are available in white and blue.

05177 MED-COMFORT SAFE PROTECT 3 professional overalls

The professional overalls with all extras. Featuring a three-piece hood, elasticated wrists, ankles, and waist, a zip with double storm flap, a three-piece crotch gusset, thumb loops, antistatic material, microporous film laminate, red-taped seams, CE cat. III, type 4+5+6, spray- and dust-proof and, in a limited way, splash-proof. Furthermore, the overalls conform to: EN 530, EN ISO 13935-2, EN 863, EN ISO 7854 B, EN ISO 9073-4, EN ISO 13934-1, EN ISO 17491-4:2008 + EN 13034:2005 + A1:2009, EN ISO 13982-1, EN 1073-2:2002, EN 14126:2003, EN 13938-1, EN ISO 6529, EN 13274-4, EN 1149-1, EN 1149-3, EN ISO 3071, EN 25978. Protection from contamination according to EN 1073-2:2002. Resistance to infectious agents according to EN 14126:2003. The overalls are available in white with red-taped seams.

OUR DISPOSABLE PROTECTIVE SETS ARE SPECIALLY DESIGNED FOR THE FOLLOWING PROTECTIVE AND PREVENTIVE APPLICATIONS:

In hospitals and nursing facilities, they are ideally suited to protect visitors and staff. Some sets are specially designed for nursing applications and for the treatment of MRSA and norovirus patients.

In food production and food processing, disposable protective sets ensure hygiene and prevent the unintentional contamination of workshops, production plants, and food laboratories. The other areas in which disposable sets for visitors are used include laboratories, agricultural and veterinary businesses as well as the pharmaceutical industry.

All sets ensure that visitors are protected from dirt and, through their clothes, do not cause contamination in sensitive areas.

05030-W-Set Safe-Comfort visitor set

- Consisting of:
 - 1x PE protective gown in white with 3 buttons

Focusing on: the safety of patients.

With these non-slip socks, you minimise the risk of falls!

Med-Comfort disposable non-slip socks

- Size easily determined through colour coding
- Made of soft and very elastic polyester
- Particularly stretchy material for x-wide size
- Excellent wearing comfort and good fit
- Grippy knobs both on the top and at the bottom provide high security even if the socks twist or slip out of place
- Ensure a secure tread and traction
- For one-off use, do not wash
- For healthcare and nursing applications in hospitals, retirement and nursing homes, rehabilitation and therapy, hotels, wellness and spa areas

Dispensing of medication and medication processing.

L-09191 Medicine tray

- Made of plastic material
- To be used for the safe transport of 19 drug dispensers and 19 medicine cups

Item number	Colour	Approx. dimensions in mm	Packaging unit
L-09191	White	440 x 340 x 15	1 unit

L-09176 Tray for 28 medicine cups

- Made of polystyrene
- For 28 medicine cups
- Makes possible the easy handling of medicine cups when dispensing medication

Item number	Colour	Approx. dimensions in mm	Packaging unit
L-09176	White	375 x 225 x 40	1 unit

L-09209 Med-Comfort tablet dispenser

- Made from acrylonitrile butadiene styrene (ABS) / polycarbonate (PC)
- 7-day-dispenser with 4 removable compartments each
- Impact-resistant with low temperatures
- Heat-resistant
- High stability
- Printed in 4 languages

Item number	Colour	Approx. dimensions in mm	Packaging unit
L-09209	White	100 x 40 x 120	1 unit

L-09160 Tablet mortar for medicine cups L-09170, L-09172, L-09175

- Made of polyamide and stainless steel
- For narrow medicine cups
- Easy handling and hygienic
- Turns tablets into easy-to-take tablet powder without much effort

Item number	Colour	Packaging unit
L-09160	White	1 unit

L-09161 Med-Comfort tablet crusher

- Made of polycarbonate
- Two-coloured (bottom: transparent, top: blue)
- Height when closed ca. 35mm
- Through light turning, the tablets are crushed into an easy-to-take, fine powder

Item number	Colour	Packaging unit
L-09161	Transparent/blue	1 unit

L-09169 Med-Comfort pill puncher

- Made of acrylonitrile styrene (AS) plastic
- For easy removal of tablets from the blister

Item number	Colour	Approx. dimensions in mm	Packaging unit
L-09169-B	Blue	55 x 32 x 15	1 unit

L-09165 3-in-1 Tablet crusher

- Made of acrylonitrile butadiene styrene (ABS)
- Diameter ca. 42mm, height ca. 64mm
- For storing, grinding, and cutting of tablets
- Tablet compartment for either 2 or 3 kinds or crushed tablets

Item number	Colour	Packaging unit
L-09165	White	1 unit

L-09201 Medicine spoon

- Made of polypropylene
- Dishwasher-proof

SoreProtect Sterile

- Sterile, skin-friendly postoperative wound dressing
- Made of polyurethane film and central absorbent pad made of viscose and polyester, non-abrasive
- Skin-friendly polyacrylate adhesive, self-adhesive and gently removable
- Soft, elastic and smooth, thus particularly well formable
- Suitable for sensitive skin
- Rounded corners prevent the bandage from rolling up
- Individually sterile packed
- For postoperative stationary and ambulant wound care

*Sterile and light.
With skin-friendly
polyacrylate adhesive.*

Quality features

- Sterile
- Medical product Class I sterile in line with the directive 93/42/EEC

Self-adhesive plaster offers effective, practical and versatile solutions and applications in wound management:

- For attaching bandages of all types, usually gauze, gauze bandages and compresses. This combo neatly covers wounds
- For attaching catheters, probes, cannulas and tubes to prevent slippage or unintended wrong positioning of medical material
- For attaching wound dressings to joints and round and conical body parts and for attaching dressings to large external areas
- For supporting, stabilising and providing relief to muscles, joints and ligaments

Use of disposable gloves in clinics and health care facilities – for which application which glove in which quality should be used?

A question that arises in everyday clinical practice and which AMPri can answer with a diverse product portfolio. As soon as contact with blood, secretions or contaminated objects occurs in the hospital, disposable gloves should be worn. Other activities such as preparation for medication, cleaning and cleaning work, nursing activities, etc. may also make the use of gloves necessary or be a must. For different applications, the appropriate glove with corresponding quality features is required. For each institution, this has to be defined in advance and implemented in the existing plans to support compliance.

AMPri will be pleased to support you on this topic. Because: In the beginning was the glove. Since 1994, AMPri has been offering its customers high-quality disposable gloves for almost every field of application. Many years of experience in this working environment and the proximity to the market make it possible to offer the best glove quality for activities in clinics and health care facilities and to meet the various requirements through constant product innovations.

Recommended gloves for special applications in hospitals and health care facilities

01194 Med Comfort Blue Ultra 300, blue nitrile glove with a length of approx. 300 mm. 100 pieces in a box*.

01240 Med Comfort Blue Ultra 400, strong blue nitrile glove with approx. 400 mm length for best splash-, hand- and skin protection. 50 pcs. in a box*.

01195 SolidSafety High Risk ChemN, blue and strong chemical protection glove, approx. 300 mm long, with good tactile sensitivity for e.g. drug preparation with cytostatic solutions and active ingredients etc., 50 pcs. in box*.

081303 SolidSafety ChemN, green special nitrile protective glove made of **worldwide unique special polymer**. The material has a new composition of components as well as a higher density than the multitude of other nitrile disposable gloves. This allows a significantly better, about 25 % improved resistance compared to other disposable gloves made of nitrile, which have an identical layer thickness and the highest approved tightness / penetration of an AQL of 0,65. The glove has an **extraordinary good grip**, is **REACH-compliant**, has an **excellent resistance to cytostatic ingredients** and a **high resistance to many chemicals**.

Length of the glove approx. 240 mm, 100 pcs. in the box*.

The quality of gloves is defined in various technical regulations and standards, for protection against infections in the doctor-patient relationship (EN 455), freedom from latex powder (TRGS 450) and protection of the user against chemicals, microorganisms and mechanical risks (EN 420, EN 374, EN 388). Nitrile gloves are generally not suitable for handling chemicals, not even for cleaning and disinfection work. Nitrile gloves can be suitable for this, depending on the labelling. PVC gloves are unsuitable if high demands are placed on tear resistance and durability. Light and heat trigger oxidation processes and reduce tear resistance. For this reason, gloves must be kept away from light and heat* (*Source: DGKH, Deutsche Gesellschaft für Krankenhaushygiene)
